**Re: Private Water Supply Well Sampling Results and Health Risk Evaluation  
127 Fruitland Road, Hamlet, NC 28345**

Dear Mr. Russell:

Attached please find the laboratory results for the water supply well sample that was collected from your well on September 8 2010 by S&ME, Inc. The sample was analyzed for volatile organic compounds (VOCs) and for inorganics. The chemistry results were forwarded to the Division's Inactive Hazardous Sites Branch (Branch) in November 2010.

The Branch's toxicologist has reviewed this data. As indicated on the attached Health Risk Evaluation, the water from this private supply well is suitable for normal household use.

If you have any questions or comments, please feel free to give me a call at 910.433.3354. Thanks once again for your cooperation.

Sincerely,

P. Sean Boyles, L.G.

Re: Health Risk Evaluation  
Herman Russel Drinking Water Well (WSW-4)  
127 Fruitland Rd.  
Hamlet, Richmond County

A water sample was collected from the water supply well at the subject address on September 8, 2010. None of the chemicals were detected at a concentration above applicable standards. The standards used to determine if the water is suitable for drinking and cooking are the federal drinking water standards (USEPA MCL), or where there is no MCL, the North Carolina Groundwater Quality Standard (NC 2L). If a USEPA MCL or NC 2L are not available a health based concentration is calculated.

If contaminant concentrations exceed the applicable standards for using the water for drinking and cooking, the contaminant concentrations are further analyzed to determine if the water is suitable for other household uses, such as showering, bathing, washing dishes, flushing toilets, and hand washing. Therefore, based on this evaluation the water from this well can be used for drinking, cooking and all other purposes listed above. Please note that contaminants identified with a JB on the laboratory sheet were not evaluated because they are believed to be artifacts of sampling or analysis. The table below compares the detected contaminant concentrations with the applicable standards

Sample #	Contaminant	September 8, 2010 Concentration ug/l	USEPA MCL ug/l	15A NCAC 2L ug/l	Calculated Health-based Concentrations ug/l
C011558-07	Copper	15	1,300	**	**
	Selenium	3.91 J	50	**	**
	Silver	1.91 J	*	20	**
	Zinc	8.40 J	*	1,000	**

**Re: Private Water Supply Well Sampling Results and Health Risk Evaluation  
1061 N Highway 177, Hamlet, NC 28345**

Dear Ms. Chapell:

Attached please find the laboratory results for the water supply well sample that was collected from your well on September 8 2010 by S&ME, Inc. The sample was analyzed for volatile organic compounds (VOCs) and for inorganics. The chemistry results were forwarded to the Division's Inactive Hazardous Sites Branch (Branch) in November 2010.

The Branch's toxicologist has reviewed this data. As indicated on the attached Health Risk Evaluation, the level of trichloroethene in your well water is above the federal Maximum Contaminant Level (MCL). The MCL is the allowable limit for public water systems.

If you have any questions or comments, please feel free to give me a call at 910.433.3354. Thanks once again for your cooperation.

Sincerely,
